

## Displaying User Feedback

### Write-up:

1. Created a Spring Boot project that will capture user feedback using a REST endpoint.
2. The REST resource will take in parameters using HTTP POST.
3. The feedback data will be then added to a database table.
4. As a part of developing an ecommerce web application, a REST resource is needed to capture user feedback.
5. Feedback data will be received from third-party apps and websites.
6. The data will be sent to the REST API which will collect feedback from various sources.
